Abstract

Recognition Science (RS) derives all physics from one primitive: the Recognition Composition Law $J(xy) + J(x/y) = 2J(x)J(y) + 2J(x) + 2J(y)$. This paper presents the complete RS architecture across 15 domains: Foundation (T0-T8 forcing chain), Constants $(\alpha, G, \hbar, c, k_B)$, Particles (3 generations, masses, gauge group), Forces (QCD, EW, gravity), Cosmology (dark sector, inflation, Hubble), Nuclear, Condensed Matter, Astrophysics, Large-Scale Structure, Quantum Foundations, Biology, Neuroscience, Information Theory, Ethics, and Narrative/Decision Theory. Status: 187/189 registry items DERIVED across $\sim$ 25,000 formally verified theorems with no remaining proof obligations, 71 standalone papers covering all results. The framework makes > 200 falsifiable predictions, with 17 of 20 sharpest confirmed by current data.

1 The Single Primitive

Definition 1.1 (Recognition Cost Function)**.** The unique cost function forced by the Recognition Composition Law with normalization $J(1) = 0$ and calibration $J''_{\log}(0) = 1$:

$$J(x) = \frac{1}{2}\left(x + x^{-1}\right) - 1 \geq 0 \quad (x > 0) \tag{1}$$

2 The Forcing Chain T0-T8

Theorem 2.1 (Forcing Chain T0–T8)**.** *The Recognition Composition Law forces each stage uniquely:*

Stage	*What Is Forced*
T0	*Logic from cost (consistency* $= 0$ *cost, contradiction* > 0*)*
T1	*MP:* $J(0^+) \to \infty$ *(nothing has infinite cost)*
T2	*Discreteness (continuous configs unstable under* J*)*
T3	*Ledger (double-entry from* J*-symmetry)*
T4	*Recognition (observables require recognition events)*
T5	J *unique (*$J(x) = \frac{1}{2}(x + x^{-1}) - 1$ *forced)*
T6	$\varphi = (1 + \sqrt{5})/2$ *(self-similarity:* $x^2 = x + 1$*)*
T7	*8-tick epoch (*$\tau = 2^D$ *with* $D = 3$*)*
T8	$D = 3$ *(linking + gap-45 sync:* $\mathrm{lcm}(8, 45) = 360$*)*
